

📍 14 LOCAL CSOS · 11 PROVINCES

— LOCALLY-LED PROTECTION INFORMATION MANAGEMENT

A protection monitoring system *run by the people* closest to the people.

A locally-led protection information management initiative designed by Integrity Consulting and conceptualised for DKH — built to place national and grassroots organisations at the centre of how protection data is collected, analysed, and turned into evidence.

WHY THIS WORK MATTERS

Local knowledge is the missing layer in most protection monitoring.

In a system dominated by Western donors, UN agencies and international NGOs, the knowledge held by local actors is rarely integrated into formal protection monitoring. We built this initiative to change that: local civil society not as a data subject or sub-contracted enumerator, but as a co-author of analysis and a partner in advocacy — grounded in the Global Protection Cluster’s analytical standards.

THE ARCHITECTURE WE DESIGNED

From co-design to dashboard, *end to end.*

Rather than parachuting in tools, we co-designed every layer with the organisations who would use it — an integrated protection-monitoring stack that local partners own operationally and that meets global technical standards.

METHODOLOGY

PAF-aligned analytical framework

Grounded in the Global Protection Cluster's Protection Analytical Framework, with harmonised indicators so findings can be compared, aggregated, and used in advocacy without losing local nuance.

TOOLS

Digital data collection, built for the field

Mobile tools on Kobo/ODK: household interviews, KIIs, focus groups, observation forms and service-provider KIIs — translated, piloted, and refined with the people using them.

CAPACITY

Training that compounds round on round

Four face-to-face and three online trainings on protection analysis, PIM, ethics, safe referral and evidence-based advocacy — capacity grows with each round, not just before it.

DASHBOARDS

Bilingual, interactive, interoperable

Live bilingual dashboards for each round, a Türkiye-wide service-mapping layer, and a referral protocol that makes the data interoperable across organisations and sectors.

— PHASE 3 FINDINGS · APR–MAY 2026

395 households. 72 KIIs. 10 provinces. One protracted picture.

The third round confirms what local partners have been saying for months: most refugee households are not preparing to leave — they are settling deeper into a protracted displacement shaped by shrinking healthcare access, mounting debt, and tightening documentation rules.

88%

HOUSEHOLDS INTEND TO
REMAIN IN TÜRKİYE

51%

CANNOT MEET ESSENTIAL
NEEDS

26.8%

UNABLE TO ACCESS
HEALTHCARE

Behind each number is a household that local CSO data collectors visited, listened to, and recorded — and a finding the system aggregates into evidence that travels from the field to the dashboard, the report, and the policy table.

Source: Localised ProMo Phase 3 dataset, April–May 2026.

Localisation isn't just about who collects the data — it's about who decides what the data means and where it lands.

— Key message, Localised ProMo

Findings from this initiative directly fed the **Brussels Roundtable at the European Parliament** co-hosted with Tineke Strik MEP, and continue to inform policy briefings with EU donors and DKH headquarters — closing the loop between the field, the dashboard, and the policy table.
